Safety service consultants are available statewide to assist Ohio employers across all industries in identifying and addressing workplace risks. These services, included as part of an Ohio Bureau of Workers' Compensation (BWC) policy, support employers in creating safer work environments and reducing potential injuries and illnesses. Contact us at BWCsafetyServices@bwc.ohio.gov or 1-800-644-6292.

Safety Consultants

Assist with hazard identification and can provide guidance on risk mitigation strategies associated with hazardous conditions, unsafe behaviors, and regulatory requirements such as lockout/tagout, machine guarding, confined spaces, construction safety, etc.

Ergonomic Consultants

Aid employers in finding ways to make work safer and easier on the body. They look at tasks like lifting, pushing, bending, and pulling and suggest changes to reduce the risk of strain and sprain injuries, a leading cause of injury costs and lost time.

Industrial Hygiene Consultants

Help employers understand their unique risk and exposure to harmful chemicals, loud noises, and poor air quality. Our consultants can provide workplace noise level testing and indoor air quality assessments.
